

SCProbond™ Wear Solutions in Limestone Conveyance

Customer Testimonial

“

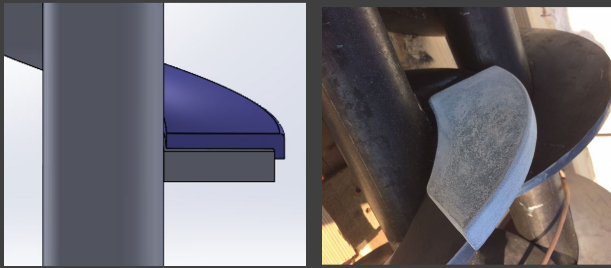

“SCP made a shaft liner for our air separator, the original lasted less than 2 years before it was worn in two pieces. Since we installed [the SCP liner] we have run for two years with no noticeable wear ... Last year we reconfigured a couple feed chutes with all SCP product. The writing from the manufacturing process is still visible after running nearly 80,000 tons of 1/4" minus over it.”

-Limestone Mine Operator and Returning SCP Customer

SCProbond™ N
60" Trough Liner
33 months in service

SCProbond™ WRC
Wear Resistant Compound
13 months in service

This customer asked if SCP could manufacture a SCProbond™ N lining for their screw conveyor to keep the flights from losing diameter. We were provided with the dimensions of the both the screw and housing and got to work on these contoured 90 degree flight plates that have extended the conveyor lifetime over 20 months and counting.

SCProbond™ LV-1
Low Viscosity Adhesive
28 months in service

SCProbond™ N
Custom Flight Plates
28 months in service

Customer's steel screw
lasted < 1 year unlined
